

WE'RE MORE THAN SOFTWARE DEVELOPERS.
**IT'S ALL ABOUT
THE EXPERIENCE.**

Software Engineer (m/f/x)

Innsbruck

Microservice Architecture | Kubernetes | Cloud Native | Autonomous Cloud | Continuous Delivery | Java

Now the time has come and Dynatrace has opened a Lab in Innsbruck!

Fascinated by cutting-edge cloud technologies? You want to bring our customers to the next level on their journey to Autonomous Cloud Enablement and self-healing IT? You want to help our customers automate their release processes and put cutting-edge release validation and auto-remediation at our customer's fingertips? Apply and be part of our young, motivated, and highly talented team.

Who we are:

Dynatrace is a single-product software company that delivers software intelligence for the enterprise cloud. We have reinvented cloud and application performance monitoring to full-scale, end-to-end visibility of every user, across every application, anywhere in the digital ecosystem. The Dynatrace platform is easy, automatic, AI-powered monitoring!

What you will be a part of:

The Innsbruck office will initially focus on transforming Keptn, our open-source Kubernetes automation framework, into an enterprise-ready product that brings a native cloud experience as a managed solution to our customer's private Kubernetes environments.

We have ambitious but well-planned roll-out plans for a brand-new lab, which will be strategically located for the best employee experience and company visibility.

One only has to [experience our other world-class European labs](#) to imagine what is on the horizon for Innsbruck.

How we work - minimum red tape and maximum autonomy

We are a very international, colorful community contributing to one single, market-leading product: The Dynatrace software intelligence platform.

Each team is fully self-managed and works closely together with the Product Owner and Product Management to deliver value. As a whole organization, we are working in a highly agile and fully technology-focused environment where everyone speaks the same language.

We run our software development cycle on an extremely high level of automation, making it tremendously easy for teams to push their changes from concept to production at light speed.

To power digital services, organizations are shifting from traditional on-premises data centers to multi-cloud environments with Kubernetes as the orchestration layer. These environments are dynamic, with applications, microservices, containers, and infrastructure coming and going in seconds, and a volume, velocity, and variety of data that are beyond human capacity to manage. We are not only required to process data on a massive scale but also to think about scalability, starting from down to the level of processing these amounts of data

Your What you will be working on

- Build an **enterprise-ready solution** based on our open-source framework Keptn
- Leverage **automation** and integrations with the Dynatrace Platform and bring world-class **IT operations experience** to our customers
- Work with **cutting-edge technologies** (Kubernetes/EKS/AKS/GKE, Kubernetes Operator, Golang, Helm, Terraform, ...)
- Implement exciting **DevOps Use Cases** (Canary, Auto-Remediation, Automated Operations, ...) based on Dynatrace and Keptn
- Collaborate with **local and international** development teams
- **Leave a footprint**: Drive a new topic at Dynatrace and ensure pace and stability in the further development of **our** Cloud Automation Solution!

Your profile

- Software Engineer with interest in **Cloud-Native** Technologies
- Some experience in Software Delivery
- Good programming skills
- Knowledge of **CI/CD Tools, Microservice Architectures, and Kubernetes** is a plus
- **Golang** know-how is a plus

Why Dynatrace

- The **world's largest enterprises** use our solution, including more than 70 of the Fortune 100 companies.
- We are a one-product **software company** with a **flat hierarchy**, with over 750+ software engineers.
- International working environment with **English as our corporate language**.
- We believe in an **outstanding employee experience**, a **culture of innovation** and **autonomy**, along with an **entrepreneurial mindset** as the basis for an exceptional product that provides real value.

Due to legal reasons, we are obliged to disclose the minimum salary for this position, which is € 38,010 gross per year based on full-time employment (38.5 h/week). We offer a higher salary in line with qualifications and experience.
